

Valeriy A. Buryachenko

Local and Nonlocal Micromechanics of Heterogeneous Materials

 Springer

Contents

1	Introduction	1
1.1	Classification of Composites and Nanocomposites	1
1.1.1	Geometrical Classification of Composite Materials (CM).....	2
1.1.2	Classification of Mechanical Properties of CM Constituents	5
1.1.3	Classification of CM Manufacturing.....	8
1.2	Effective Material and Field Characteristics.....	9
1.3	Homogenization of Random Structure CM.....	13
1.4	Overview of the Book	16
2	Foundations of Solid Mechanics	19
2.1	Elements of Tensor Analysis	19
2.2	The Theory of Strains and Stresses	23
2.3	Basic Equations of Solid Mechanics	27
2.3.1	Conservation Laws, Boundary Conditions, and Constitutive Equation	27
2.3.2	The Equations of Linear Elasticity	33
2.3.3	Extremum Principles of Elastostatic	34
2.4	Basic Equations of Thermoelasticity and Electroelasticity	36
2.4.1	Thermoelasticity Equations	36
2.4.2	Electroelastic Equations	40
2.4.3	Matrix Representation of Some Symmetric Tensors ...	43
2.5	Symmetry of Elastic Properties	46
2.6	Basic Equations of Thermoelastoplastic Deformations	54
2.6.1	Incremental Theory of Plasticity	54
2.6.2	Deformation Theory of Plasticity	57

3	Green's Functions, Eshelby, and Related Tensors	59
3.1	Static Green's Function	59
3.2	The Second Derivative of Green's Function and Related Problems	63
3.2.1	The Second Derivative of Green's Function	63
3.2.2	The Tensors Related to the Green's Function	66
3.3	Dynamic Green's and Related Functions	67
3.4	Inhomogeneity in an Elastic Medium	72
3.4.1	General Case of Inhomogeneity in an Elastic Medium	72
3.4.2	Interface Boundary Operators	75
3.5	Ellipsoidal Inhomogeneity in the Elastic Medium	78
3.6	Eshelby Tensor	81
3.6.1	Tensor Representation of Eshelby Tensor	81
3.6.2	Eshelby and Related Tensors in a Special Basis.....	86
3.7	Coated Ellipsoidal Inclusion and Imperfect Interface Models ...	90
3.7.1	Elastic Moduli of Fictitious Ellipsoidal Homogeneous Inclusion	91
3.7.2	Ellipsoidal Heterogeneity with Thin Coating.....	94
3.7.3	Imperfect Interface.....	96
3.8	Related Problems for Ellipsoidal Inhomogeneity in an Infinite Medium	100
3.8.1	Conductivity Problem	100
3.8.2	Scattering of Elastic Waves by Ellipsoidal Inclusion in a Homogeneous Medium	105
3.8.3	Piezoelectric Problem.....	109
4	Multiscale Analysis of the Multiple Interacting Inclusion Problem: Finite Number of Interacting Inclusions	111
4.1	Description of Numerical Approaches Used for Analyses of Multiple Interacting Heterogeneities	111
4.2	Basic Equations for Multiple Heterogeneities and Numerical Solution for One Inclusion	116
4.2.1	Basic Equations for Multiple Heterogeneities.....	116
4.2.2	The Heterogeneity v_i Inside an Imaginary Ellipsoid v_i^0	119
4.2.3	Estimation of Concentration Factor Tensors by FEA	122
4.3	Boundary Integral Equation Methods.....	125
4.3.1	Formulation of Boundary Integral Equations.....	126
4.3.2	Interface Polarization Tensors and Perturbators for a Single Inclusion Inside Macrodomein	129
4.3.3	Method of Fundamental Solutions (MFS)	134
4.3.4	Matrix Representation of the MFS	138

4.4	Volume Integral Equation Method	142
4.4.1	Regularized Representation of Integral Equations	142
4.4.2	The Iteration Method	145
4.4.3	Initial Approximation for Interacting Inclusions in an Infinite Medium.....	147
4.4.4	First-Order and Subsequent Approximations.....	151
4.4.5	Operator Representations of Solutions for One and Two Inclusions	153
4.4.6	Approximate Representations of Some Tensors and Operators	156
4.4.7	Concluding Remarks	158
5	Statistical Description of Composite Materials	159
5.1	Basic Terminology and Properties of Random Variables and Random Point Fields	160
5.1.1	Random Variables.....	160
5.1.2	Random Point Fields	164
5.1.3	Basic Descriptors of Random Point Fields	167
5.2	Some Random Point Field Distributions.....	171
5.2.1	Poisson Distribution	171
5.2.2	Statistically Homogeneous Clustered Point Fields	174
5.2.3	Inhomogeneous Poisson Fields	176
5.2.4	Gibbs Point Fields	178
5.3	Ensemble Averaging of Random Structures	181
5.3.1	Ensemble Distribution Functions	182
5.3.2	Statistical Averages of Functions	188
5.3.3	Statistical Description of Indicator Functions	191
5.3.4	Geometrical Description and Averaging of Doubly and Triply Periodic Structures.....	195
5.3.5	Representations of ODF	197
5.4	Numerical Simulation of Particle Random Composites	199
5.4.1	Materials and Image Analysis Procedures	203
5.4.2	Hard-Core Model	204
5.4.3	Hard-Core Shaking Model (HCSM)	205
5.4.4	Collective Rearrangement Model (CRM)	207
5.4.5	Numerical Results for Unimodal Distribution.....	208
5.4.6	Numerical Results for Bimodal Distribution (Application to Solid Propellants)	213
6	Effective Properties and Energy Methods in Thermoelasticity and Thermoelastoelectricity of Composites	219
6.1	Effective Thermoelastic Properties.....	219
6.1.1	Hill's Condition and Representative Volume Element.....	219

6.1.2	Effective Elastic Moduli	223
6.1.3	Apparent Elastic Moduli for Finite-Size RVE.....	226
6.1.4	Overall Thermoelastic Properties	229
6.2	Effective Energy Functions	233
6.3	Some General Exact Results	239
6.3.1	Two-Phase Composites	239
6.3.2	Polycrystals Composed of Transversally Isotropic Crystals	247
6.3.3	Exact Representation for First and Second Moments of Stresses Averaged over the Phase Volumes	250
6.4	Variational Principle of Hashin and Shtrikman.....	255
6.5	Hill's Bounds of Effective Elastic Moduli	260
6.6	Some General Representations for Thermoelectroelasticity of Composites	265
6.6.1	Generalized Hill's Conditions and Effective Properties.....	266
6.6.2	Effective Energy Functions.....	269
6.6.3	Two-Phase Composites	270
6.6.4	Discontinuities of Generalized Fields at the Interface Between Components	271
6.6.5	Phase-Averaged First and Second Moments of the Field Σ	272
7	General Integral Equations of Micromechanics of Composite Materials.....	277
7.1	General Integral Equations for Matrix Composites of Any Structure	279
7.2	Random Structure Composites	282
7.2.1	General Integral Equation for Random Structure Composites	282
7.2.2	Some Particular Cases	288
7.2.3	Comparison with Related Equations	289
7.3	Effective Field Hypothesis and Asymptotic Representation of the GIE (7.19) and (7.20)	295
7.3.1	Effective Field Hypothesis	295
7.3.2	About Renormalized Terms in Eqs. (7.19) and (7.32)	297
7.3.3	Model Example	298
7.4	Periodical Structure Composites	300
7.4.1	Short Review of Analyses of Periodical Structure Composites	300
7.4.2	Doubly and Triply Periodical Structure Composites ...	302

7.4.3	Triply Periodic Particulate Matrix Composites with Imperfect Unit Cells.....	305
7.5	Concluding Remarks.....	308
8	Multiparticle Effective Field and Related Methods in Micromechanics of Random Structure Composites	311
8.1	Definitions of Effective Fields and Effective Field Hypotheses	312
8.1.1	Approximate Effective Field Hypothesis	312
8.1.2	Closing Effective Field Hypothesis	314
8.1.3	Effective Field Hypothesis and Composites with One Sort of Inhomogeneities	316
8.2	Multiparticle Effective Field Method	319
8.2.1	Average Stresses in the Components.....	319
8.2.2	Effective Properties of the Composite	321
8.2.3	Some Related Multiparticle Methods	323
8.3	One-Particle Approximation of the MEFM and Mori-Tanaka Approach	325
8.3.1	One-Particle (“Quasi-Crystalline”) Approximation of MEFM	325
8.3.2	Mori-Tanaka Approach	330
8.3.3	Effective Properties Estimated via the EFM and MTM at $\mathbf{Q}_i \equiv \mathbf{Q}_i^0$	334
8.3.4	Some Methods Related to the One-Particle Approximation of the MEFM	336
8.3.5	Some Analytical Representations for Effective Moduli	338
8.4	Hashin–Shtrikman Bounds Estimations	342
8.4.1	The Scheme by Willis for Obtaining Hashin–Shtrikman Bounds	342
8.4.2	EFH and Hashin–Shtrikman Bounds for CMs with Noncanonical Inhomogeneous Inclusions	346
8.4.3	Interface Boundary Integral Representations	349
8.4.4	Numerical Results	351
8.4.5	Some Representations Related with Hashin–Shtrikman Bounds	354
8.5	Related Perturbation Methods.....	358
8.5.1	Combined MEFM–Perturbation Method	358
8.5.2	Perturbation Method for Small Concentrations of Inclusions.....	360
8.5.3	Perturbation Method for Weakly Inhomogeneous Media	361
8.6	Effective Medium Methods.....	362
8.6.1	Application to Composite Materials	362
8.6.2	Analysis of Polycrystal Materials	366

8.7	Differential Methods	367
8.8	Numerical Results	369
8.8.1	Composites with Spheroidal Inhomogeneities	369
8.8.2	Composites with Polifractional Inhomogeneities (Solid Propellants)	374
8.8.3	Nanocomposites	380
8.8.4	Some Prospective Problems in Modeling of Nanocomposites	388
8.9	Critical Analysis of Maxwell Homogenization Schemes	392
8.9.1	Classical Maxwell Scheme and Its Comparison with EFM and MTM	392
8.9.2	Deficiencies of Maxwell Scheme	395
8.9.3	Generalized Maxwell Schemes Taking Inclusion Interactions into Account	398
9	Basic Representations of New Background of Analytical Micromechanics	403
9.1	Stress and Strain Distributions for One Heterogeneity Inside Infinite Matrix	404
9.2	Some Classical Hypotheses and Approaches Based on the Classical GIE (7.32) and (7.33)	407
9.2.1	Effective Field Hypothesis H1 and Some Perturbator Representations	407
9.2.2	The Hypotheses H2 and H3 and Some Classical Approaches	409
9.3	Estimation of Both the Average Fields and Effective Properties Based on the New GIE (7.19) and (7.20)	412
9.3.1	General Case of Arbitrary Number of Components	412
9.3.2	Some Particular Cases	414
9.3.3	Iteration Method and Abandonment of the Hypothesis H1a	417
9.3.4	Elastically Homogeneous Medium with Random Residual Stresses	418
9.3.5	Comparisons with Some Exact Results	420
9.4	Qualitative Analysis of the New GIE, Some Classical Hypotheses, and Propositions	422
9.4.1	Analysis of Proposition 9.2.1 and Hypothesis H1	422
9.4.2	Analysis of Proposition 9.2.2 and Hypotheses H1b and H3	424
9.5	Numerical Results	426
9.5.1	Finite Element Analysis in the Framework of the Hypothesis H1a	426
9.5.2	Iteration Method (Abandonment of the Hypothesis H1a)	435

9.6	Hashin–Shtrikman Bounds of Effective Moduli Based on the New GIE	439
9.7	Concluding Remarks	442
10	Inhomogeneity of the First and Second Statistical Moments of Stresses Inside the Heterogeneities of CMs	445
10.1	Effective Moduli and the First Statistical Moments Inside Inclusions	447
10.1.1	General Representations	447
10.1.2	Closing Assumptions	448
10.1.3	Initial Approximations Based on New Eq. (7.20)	450
10.1.4	Initial Approximations Based on Classical Eq. (7.33)	453
10.1.5	Some Related Integral Equations	454
10.2	Integral Equations for Second Moments of Stresses	456
10.2.1	Second Moment of Stresses Inside the Heterogeneities	456
10.2.2	Stress Fluctuations Inside the Matrix	460
10.2.3	Second Moment of Stresses at the Interface	461
10.3	Second Moments of Stresses Inside the Components	462
10.3.1	Initial Approximation	462
10.3.2	High-Order Approximation	464
10.4	Elastically Homogeneous Composites with Randomly Distributed Residual Microstresses	466
10.5	Related Method of Estimations of the Second Moments of Stresses	467
10.6	Numerical Results	468
10.6.1	Effective Moduli and the First Statistical Moments of Stresses Inside the Inclusions	468
10.6.2	Stress Fluctuations Inside the Inclusions	474
10.7	Conclusion	479
11	Interface Integral Technique in Thermoelasticity of Random Structure Matrix CMs	483
11.1	Interface Polarization Tensors and Effective Properties	483
11.2	Interface Integral Technique	485
11.2.1	General Integral Equation for Microinhomogeneous Infinite Medium	485
11.2.2	Some Classical Hypotheses and Approaches	488
11.2.3	Solution of GIEss	490
11.2.4	Iteration Method in Terms of the Interface Perturbator Factor	493
11.2.5	Numerical Results	495

- 11.3 General Integral Equations in Micromechanics of CMs with Imperfectly Bonded Interfaces 502
 - 11.3.1 Stress and Strain Distributions for One Heterogeneity Inside Macrodomain w 503
 - 11.3.2 General Integral Equations 506
 - 11.3.3 Simple Example of Residual Stresses..... 509
- 11.4 General Boundary Integral Equations of Stokes Flow Inporous Media 510
 - 11.4.1 Stokes Equations and Fundamental Solutions..... 511
