The Mechanical Engineering Master's Program provides a modern mechanical engineering education with focus in engineering decision-making; foundations of mathematics, physical science, engineering science, and design; and an appreciation of societal impact of engineering practice.

We actively seek to admit a diverse group of students in mechanical engineering to address the contemporary challenges of our society. To date, our graduates have achieved successful careers in academia as distinguished professors, in industry as engineers and entrepreneurs, and in government positions as program directors for national funding agencies or scientists at national laboratories. Check out our **alumni employment!**

*Students entering the program will have received a Bachelor's degree in mechanical engineering or a related field.*

**Priority application deadline for Fall 2020 enrollment: January 15th, 2020**
