Subject: Application for an admission for a Graduation Project

Sir,

I'm writing for you my application to ask my acceptance to carry out a graduation project within your institution.

I am an engineering student at the Tnisia Polytechnic School (TPS) which provides a multidisciplinary training for its students. Its main purpose is to enable them to assume both technical and administrative responsibilities.

As a future engineer from TPS, I will be able to design, analyze and manage some complex systems thanks to versatile study program including theoretical and applied training in mathematics, physics, economics and languages.

I am currently in my third year; I chose to pursue my studies in Mechanics and Structures specialty. Thus, my current training focuses on energies. Since I am asked to carry out a four to six month graduation project (from February to July), I would be grateful, if you could consider accepting me to carry out such a project within your institution.

The enclosed CV will give you further details about my profile. Should you require more information, I will be happy to put it at your disposal.
I look forward to receive from you.
